Details of the intercept downhole horizontal components of unknown time analysis are given in Table 3. The seismic orientation were rotated to the radial and trans-water table depth is about 1 m less than the well log verse orientations before the first arrivals were depth, while the shear wave velocity change does picked. Figures 10 through 12 show the resulting not correspond to any obvious drill log layer. The travel time curves for the P and S waves, with vertical compressional and shear wave velocities least-squares line fits used to determine the veloci-of the shallow soil were also measured by clamp-ties. These experiments indicate compressional - 1 inga three-component geophone at various depths wave velocities of 390 m s at the surface, with a - 1 in a cased, 30-m-deep borehole and recording the 1370-m s layer below, starting at a depth of travel times of P and S waves from surface hits 3 m...
